RE: Revision of program requirements for the pediatric subspecialties

Dear Colleagues,

At its recent meeting, the Review Committee (RC) for Pediatrics reviewed all comments received related to the planned revisions of the pediatric subspecialty requirements. A draft of the revisions to the general pediatric subspecialty requirements, including requirements for program leadership support, will be posted for review and comment within the next few months.

However, at this time, the RC has decided to postpone the revisions to the individual subspecialty requirements for approximately 12-18 months until all of the entrustable professional activities (EPAs) and related curriculums have been further developed by the respective subspecialties.

On behalf of the RC, thank you for all of your efforts in providing the RC the valuable input needed to develop relevant sets of program requirements. The RC appreciates all of the comments received and will retain these comments for re-review when it resumes the revision process. It also looks forward to receiving additional input from each of the specialties as they develop the specialty-specific curriculums to help inform the RC as it determines the best content for the educational content section of the requirements.

Caroline
