ABSTRACT FOR GRADUATING CHIEF RESIDENT

APPD Forum for Chief Residents

Technologic initiatives in UF Pediatrics Residency, Pensacola Program

This year, I took the initiative to implement technology more in our program making a positive influence in residents’ lives. Inpatient pediatric patient handoff lists are placed in pediatric shared drive with VPN access that helps residents to see which patients they are assigned to for the following day, so they are able to read on their new patients the night before. I also modified the paper SOAP note which now has a normal physical exam template with checkoff boxes and objectives section requires residents only to write their interpretation of the data while attesting that data is reviewed on the portal. These initiatives target improving work efficiency among residents and generating more time for self-education activities and program received positive feedbacks on these projects.
